

# Stainless Steel Pipe

**ASTM A312 ASME B36.10**

**High quality products for  
industrial & construction**

**DSG**  
VALVES & TUBE FITTINGS

## Chemical components

316/316L stainless steels are molybdenum-containing stainless steels. The molybdenum content of 316L stainless steel is slightly higher than that of 316 stainless steel. Because of molybdenum in steel, the overall performance of 316L stainless steel is better than that of 316 and 304 stainless steel. At high temperature, 316 stainless steel has a wide range of uses when the concentration of sulphuric acid is lower than 15% and higher than 85%. 316 stainless steel also has good chloride corrosion performance, so it is usually used in marine environments. The maximum carbon content of 316L stainless steel is 0.03, which can be used in applications where annealing cannot be carried out after welding and maximum corrosion resistance is required.

Type	C max	Mn max	P max	S max	Si max	Cr	Ni	Mo
304	0.08	2	0.045	0.03	1	18-20	8-11	-
304L	0.035	2	0.045	0.03	1	18-20	8-13	-
316	0.08	2	0.045	0.03	1	16-18	10-14	2-3
316L	0.035	2	0.045	0.03	1	16-18	10-14	2-3

### Corrosion Resistance

The corrosion resistance of 316 stainless steel pipes is better than 304. It has good corrosion resistance in pulp and paper production. Moreover, 316 stainless steel is also resistant to marine and corrosive industrial atmospheric erosion.

Generally speaking, 304 stainless steel and 316 stainless steel have little difference in chemical corrosion resistance, but there will be different performance in some specific media.

### Heat Resistance

316 stainless steel pipe has good oxidation resistance in discontinuous use below 1600 °C and continuous use below 1700 °C. In the range of 800-1575 °C, it is better not to continuously act on 316 stainless steel, but when 316 stainless steel is continuously used outside this temperature range, the stainless steel has good heat resistance. The carbide precipitation resistance of 316L stainless steel is better than that of 316 stainless steel, which can be used in the above temperature range.

## Mechanical components

Type	UTS MPa	Yield MPa	Elongation	Hardness	Comparable DIN number	
	N/mm Min	N/mm Min	% Min	HRB Max	wrought	cast
304	515	205	35	90	1.4301	1.4308
304L	485	170	35	90	1.4307	1.4552
316	515	205	35	90	1.4401	1.4408
316L	485	170	35	90	1.4404	1.4581

Among all steels, austenitic stainless steel has the lowest yield point. Therefore, considering the mechanical properties, austenitic stainless steel is not the best material for the stem, because to ensure a certain strength, the diameter of the stem will increase. Yield point can not be improved by heat treatment, but can be improved by cold forming.

## Specifications

### ASTM A312 Stainless Steel Pipes For Oil And Gas as listed in ASME B36.10

- Type: Seamless and Welded Stainless Steel Pipe
- Standards: ASTM
- Material: 304/304L and 316/316L.
- Length: 20 Ft (6.10 m)  
The length can be modified to your requirement up to 40 Ft (12.20 m).
- O.D. Tolerance  $\pm 0.031"$  / Only the minimum wall thickness is limited, which is -12.5% of the nominal wall. There is no maximum wall thickness limit.

#### Stainless Steel Seamless Pipe

Allowable working pressures are calculated from an S value of 12600 to 16700 psig (86.877 to 115.147 MPa) for ASTM A312 tube depending on the temperature of 100 to 750°F (37.8 to 399°C), as listed in ASME B36.10

#### For Welded Pipe

For welded and drawn tubing, a derating factor must be applied for weld integrity:

- For double-welded tube, multiply working pressure by 0.85.
- For a single-welded tube, multiply working pressure by 0.80.

## Size Table — Stainless Steel Pipe 316/316L

Allowable stress is calculated with Barlow's Formula mentioned in the last page of this data sheet.

## Conversion Tables

Weight Conversion Table					
	Kilogram	Ton	Ounce	Pound	Slug
Kilogram	1	0.001	35.27	2.2	0.0685
Ton	1000	1	35274	2204.62	68.58
Ounce	0.028349	0.000028	1	0.0625	0.00194
Pound	0.45359	0.000454	16	1	0.03111
Slug	14.59	0.01459	514.82	32.136	1

Length Conversion Table					
	Meter	Kilometer	Inch	Foot	Mile
Meter	1	0.001	39.37	3.28084	0.000621
Kilometer	1000	1	39370.1	3280.84	0.62137
Inch	0.0254	0.0000254	1	0.08333	0.000015
Foot	0.3048	0.000348	12	1	0.000189
Mile	1609.34	1.609	63.346	5280	1

## Formulas

Linear weight formula for smooth end pipe	
P 304/304L	$(D - e) * e * 0.02491$
P 316/316L	$(D - e) * e * 0.02507$

The coefficient depends on the weight of the material.

Where:

<b>P</b>	Weight [Kg/m]
<b>D</b>	Exterior Diameter [mm]
<b>e</b>	Wall Thickness [mm]

Hydrostatic Formula (Barlow's Formula)	
<b>P</b>	$(2St)/D$
<b>S</b>	$(P*D)/2t$

Where:

<b>P</b>	Hydrostatic test pressure in Psi [MPa]
<b>D</b>	Outside diameter corresponding to specified ANSI pipe size, or outside diameter calculated by adding 2t to the specified inside diameter, inch [mm].
<b>t</b>	Wall Thickness according to specified ANSI schedule number, or 1.143 times the specified minimum wall thickness, inch [mm].
<b>S</b>	Permissible Stress = Yield strength (Ys) in Psi [MPa] 60%

Conventional Terms	
<b>API</b>	American Petroleum Institute
<b>ANSI</b>	American National Standards Institute
<b>ASME</b>	American Society of Mechanical Engineers
<b>ASTM</b>	American Society of Testing Materials
<b>NACE</b>	National Association of Corrosion Engineers
<b>AWWA</b>	American Water Works Association
<b>SSAW</b>	Spiral / helical Seam Submerged Arc Welded pipe
<b>DSAW</b>	Double seam Submerged Arc Welded pipe
<b>LSAW</b>	Longitudinal seam Submerged Arc Welded pipe (one seam)
<b>ERW-HFI</b>	Electric Resistance Welded High Frequency Induced
<b>EFW</b>	Electric Fusion Welded Tube
<b>SRL</b>	Single Random Lengths: minimum average Lengths 17'6" - shortest length permissible is 9".
<b>DRL</b>	Double Random Lengths: minimum average Lengths 35" - shortest length permissible is 14".
